

Stock Sold by Supplier – Days to Sell

This report shows you, for every item that was **sold (delivered out)** in a period, **how long it sat in stock before it sold** – the number of days between the last time the item was received and the day it went out. It is grouped by supplier so you can see which suppliers' stock moves quickly and which lingers.

Example: a frame received on the 20th and sold on the 23rd shows **Sold in 3 days**.

This is a brand-new report. Your existing **Stock Sold by Supplier** report is unchanged and still available alongside it.

Where to find it

Open the **Clinical** app, then go to:

Reporting → Stock Reports → Stock Sold by Supplier (Days to Sell)

Running the report

The report opens a short window where you choose the period:

The screenshot shows a dark-themed window titled "Stock Sold by Supplier (Days to Sell)" with a close button (X) in the top right corner. Inside the window, there are four input fields arranged in a 2x2 grid. The top-left field is "Start Date" with the value "Jun 1". The top-right field is "Use Fiscal Year" with a checked checkbox. The bottom-left field is "End Date" with the value "Jun 23". The bottom-right field is "Month Template" with a dropdown menu showing "Current Month". At the bottom of the window, there are three buttons: "View / Print" (highlighted in purple), "Export Excel", and "Cancel".

- **Start Date / End Date** – the sales period you want to look at (items sold between these two dates, inclusive).
- **Month Template** – a quick way to fill the dates: pick *Current Month*, *Previous Month*, *Current Year*, etc. and the dates fill in for you.
- **Use Fiscal Year** – when ticked, the year presets follow your company's financial year instead of the calendar year.

Then choose how you want the output:

- **View / Print** – opens the report on screen, ready to print or save as PDF.
- **Export Excel** – downloads the same report as an Excel (.xlsx) file so you can sort, filter and work with the numbers yourself.

Items are grouped under each **supplier**. For every item sold you see:

Column	Meaning
Barcode	The item's barcode.
Description	The item name.
Date Received	The most recent date the item was received into stock, on or before it was sold.
Date Sold	The date the item was sold / delivered out.
Days to Sell	How many days the item sat in stock – Date Sold minus Date Received .
Quantity	The quantity sold.
Total	The stock (cost) value of the quantity sold.

At the bottom of each supplier's group you get the supplier's **average days to sell**, plus the total quantity and total value for that supplier.

Good to know

- **Each sale is its own line.** If the same item sold on two different days, you'll see a line for each, so every "days to sell" figure is meaningful.
 - **A blank (–) in Days to Sell** means there is no earlier receipt of that item on record, so the days couldn't be worked out. The line still appears with its sale and value.
 - The report uses the date the item actually **left** the branch and the date it was **received**, so it reflects real stock movement, not order dates.
